

Introducing SciVal Experts:

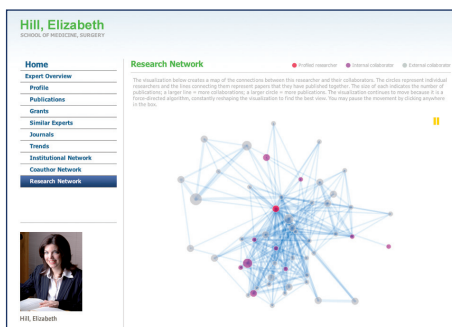

Identify expertise and enable collaboration

- A pre-populated research networking tool ready fast
- Accurate, up-to-date author profiles
- Exposes individual and department expertise

▲ Every author profile delivers a comprehensive list of papers – plus a visual Fingerprint and drill-downs on publications, grants, research trends, similar experts and more

▲ Connect and collaborate: SciVal Experts makes it easy to see opportunities within departments or across institutions

SciVal Experts delivers...

- A directory of research expertise that makes it easier to find experts and enable collaboration within institutions or across organizations
- Pre-populated with publication histories from Scopus® – the world’s largest abstract and citation database of peer-reviewed literature and quality web sources
- The ability to incorporate institutional data and individual researcher updates
- A valuable resource for:
 - Researchers
 - Administrators
 - Research Managers
 - Deans
 - Department Heads
 - Laboratory Directors
 - Research Development Professionals
 - Vice Chancellors
 - Provosts
 - Librarians
 - Students
- Web services allowing institutions to download data for further analysis, and upload institutional data into SciVal Experts

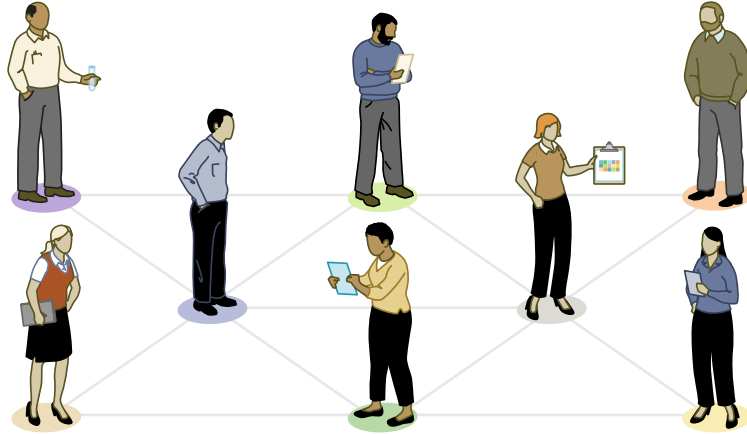

Match Funding Opportunities to Expertise

To maximize award success, SciVal Experts offers a new tool that seamlessly matches opportunities from SciVal Funding to researchers in SciVal Experts. Available to institutions with access to both SciVal Experts and SciVal Funding. Learn more at www.info.scival.com/experts/funding

The Challenge: Finding the right experts fast

When research opportunities arise, researchers, administrators, managers and senior leadership need an efficient way to identify the right collaborators, right now. But personal connections can be too narrow, word-of-mouth too slow, and collecting and maintaining a centralized system of authors too expensive and time-consuming.

To facilitate collaboration, researchers and research offices need a searchable, pre-populated tool that's easily navigated and easily enriched.

“We needed an easy-to-use system that enables us to know ‘who’ in the organization is working on ‘what,’ which can help us form collaborative teams and foster productive research relationships.”

Harry Shamoon MD,
Associate Dean and Director, Institute for
Clinical and Translational Research,
Albert Einstein College of Medicine

The Solution: SciVal Experts

Identify expertise and enable collaboration

Unlike competing tools that merely return lists of abstracts, SciVal Experts applies the Elsevier Fingerprint Engine™ to produce a visual analysis of relevant concepts that instantly exposes a researcher's greatest strengths, based on publication history. SciVal Experts helps provide answers to questions such as:

- What new publications have been produced in the institution and by whom?
- Who is working together?
- With which internal and external organizations are we collaborating?

SciVal Experts enables research administrators to:

- Identify organizational strengths by revealing expertise via publication histories
- Reduce administrative burdens: an in-house profiling system can take at least one to two years; SciVal produces an in-depth database in little time
- Drive internal and external collaborations by exposing network and publishing connections – plus unseen opportunities – within the institution and across other organizations
- Assure precision and accuracy through weekly profile updates and quarterly manual reviews that disambiguate author names and clarify profile data

SciVal Experts enables researchers to:

- Identify collaborators by areas of mutual interest – or with potential for future partnerships – inside and outside their institutions
- Track and update profile information to keep their publications histories current and visible
- Find additional opportunities by searching across the SciVal Experts Community that connects researchers to collaborators in other SciVal Experts institutions
- Expand their research reach through access to the DIRECT2experts network (US-focused), a resource of additional research profile systems. Learn more at <http://direct2experts.org>
